

American Offshore Services goal is to be a leader in sustainable solutions in service at sea. We strongly believe that when we develop services, processes and solutions that are cost effective this will unconditionally lead to less environmental impact. It is important that our employees are environmentally aware and make decisions with environmental considerations as far as it is cost-effective.

We shall always operate with the intention to prevent pollution and reduce harmful emissions.

By setting and monitoring environmental goals we assure that we constantly improve our environmental work. We are working according to the ISO 14001 standard. This policy is dictated and fully supported by senior management and applies to all employees, contractors, and visitors.

To achieve this, we are committed to the following:

- Ensure an efficient operation contributing to a fast global transition to renewable energy
- Proactively use the company's risk management system to identify, assess, mitigate, and manage risks to the environment before hazardous work is commenced
- Maintain our vessels to minimize unnecessary environmental impact
- Seek to reuse, recycle, and recover waste whenever possible
- Fulfill environmental requirements from the administration and class and ensure that national and international legislation are followed
- Investigate, analyze and follow-up reported deficiencies with the objective of reducing the environmental impact within our company
- Continuous improvement of design and development of an environmentally friendly fleet
